

Water supply problems in developing countries

We learned a lot about the specific lack of sanitation in some 3rd world countries, due to the problems related to water supply and the non-existing moves to invest in sanitation and health systems in several countries.

1. **Please describe the main problems** of poor countries related to the insufficient supply with water. **(100 words)**
2. What do you think: Is the distribution of roof-water-harvesting-systems in local villages one of the brilliant goals to change the game? **Analyse the idea! (200 words)**
3. And if not: To build water-supply-lines or systems for waste water in poor countries can not be the problem, really?! Please think of the main obstacles that hinder local societies to solve the water-supply-problem. So, **create a collection auf reasons** which slow down the worldwide deliverance of water.
4. Please send your written results to a colleague. Work on his results and correct the mistakes. After you have finished this, **start the upload in TEAMS vtdq19sauppenglisch unter Dateien! This upload has to be done this week!**
